QTA – A brief analysis of a critical issue in special education

Due Process Hearings: 2001 Update

Eileen Ahearn, Ph.D.

April 2002

Purpose and Method

Project FORUM at the National Association of State Directors of Special Education (NASDSE) has compiled a unique set of data presented in three previous reports on the incidence of due process hearings for the years 1991 to 1998.¹ Under its Cooperative Agreement #H326F000001 with the U. S. Department of Education Office of Special Education Programs (OSEP), Project FORUM surveyed all states in November 2001 to add to the eight years of due process information.

The information requested for the years 1999 and 2000 was the same as in previous years: the number of due process hearings *requested* and the number actually *held*. Respondents from two-tier states (see explanation below) were also asked to report those data for level two, i.e., hearings that were appealed to the state from a local level.

Responses were received from all 50 states and the District of Columbia. This document describes the data from the latest survey and provides a brief analysis of trends over time based on the data from all previous surveys. Tables containing all data on hearings re-

quested and held for the 10-year period 1991 through 2000 are also appended.

Background: Laws and Regulations

Requirements for designing and conducting due process hearings in special education are prescribed at both federal and state levels. Federal law requirements are specified in the Individuals with Disabilities Education Act (IDEA)[20 U.S.C. Chapter 33], and the IDEA regulations [34 *CFR* 300]. Specific due process provisions of the IDEA regulations are in Subpart E-Procedural Safeguards, specifically in §300.507-514, and §300.528. Regulations implementing Section 504 of the Rehabilitation Act of 1973 also provide federal due process protections for persons with disabilities.

In addition to federal requirements, each state has passed laws, adopted regulations and, in many cases, developed guidelines and policies relating to due process procedures for students with disabilities.

Findings: Tiers

Due process systems are structured in similar ways across the country. However, there is one major difference among states—the use of a single or two level structure. States use either a:

¹ The three previous reports are as follows: *Due Process Hearings: 1999 Update* (1999); *Due Process Hearings: An Update* (1997); and, *Mediation and Due Process Procedures in Special Education: An Analysis of State Policies* (1994).

- ❖ *One-tier system* in which the hearing is initiated at the state level with no formal hearing procedure at lower levels, or a
- ❖ *Two-tier system* in which a hearing takes place first at a lower level, usually the school or district, with the right of appeal to a state-level hearing officer or panel.

Some two-tier states do not collect data from the local level concerning tier one hearings requested or held, so the level one data for those states is not available.

There are some minor differences in the implementation of these systems. Most often, the first tier hearing is at the district level, and the second tier is a review process at the state level. However, the first tier can be held at the state level with the second tier involving another non-court component such as a state administrative law division.

State staff who support the use of a two-tier system believe that it is more effective to work toward dispute settlement at a level closest to the differing parties. Also, a more informal approach is possible at a school or district level, lessening the involvement of state personnel who may be perceived as “outsiders” to the dispute.

However, the trend in recent years has been to move from a two-tier to a one-tier system, mainly because of the delay in dispute resolution caused by the multiple levels. Since 1991 nine states—Alaska, Georgia, Illinois, Maryland, Missouri, Rhode Island, Utah, Virginia and Wisconsin—have changed from a two-tier to a one-tier system, while no conversions have been made in the other direction. The changes are as follows:

Recent changes in structure:

- AK changed to one tier in 2001.
- UT changed to one tier in 6/2000.
- VA changed to one tier 1/1/2001.
- RI changed to one tier 12/2000.

Changes noted in previous reports:

- GA changed to one tier on 2/14/94.
- IL changed to one tier on 7/1/97.
- MD changed to one tier on 7/1/96.
- MO changed to one tier on 8/28/96.
- WI changed to one tier on 6/26/96.

Table 1 contains data relating to the current status of tier structures in states.

Table 1: State Structures in 2001

<i>Type</i>	<i>States</i>
One-Tier N=34	AK, AL, AR, CA, CT, DC, DE, FL, GA, HI, ID, IL, IA, MD, MA, ME, MO, MS, MT, NE, NH, NJ, ND, OR, SD, TN, TX, UT, VA, VT, WA, WV, WI, WY
Two-Tier N=17	AZ, CO, IN, KS, KY, LA, MI, MN, NV, NM, NY, NC, OH, OK, PA, RI*, SC

*Note: RI became one tier at the end of 2000

Findings: Time Periods

Because states vary in the way they maintain their records, the spans covered for the years discussed in this report differ. For example, some states maintain their data on a calendar year basis, while others use different divisions such as fiscal years or school years. In addition, some states use different time periods for different types of data. The purpose of this analysis can be served by comparison of annual incidence, even though the specified “year” does not cover exactly the same span of months. The responses provided by states for the period corresponding to the years 1999 and 2000 are summarized in Table 2.

Table 2: State Record-Keeping Year

<i>Year</i>	<i>States</i>
Traditional Fiscal Year (N=30) 7/1/98-6/30/99 & 7/1/99-6/30/2000	AK, AZ, AR, CA, DC, DE, GA, HI, IA, KS, KY, LA, MD, MA, MN, MO, MS, NV, NJ, NM, NC, OH, OK, PA, SC, TX, UT, VA, WV, WY
Calendar Year (N=18) 1/1/98-12/31/99 & 1/1/99-12/31/2000	AL, CO, CT, FL, ID, IL, IN, ME, MI, MT, NE, NH, OR, RI, TN, VT, WA, WI
Federal Fiscal Year (N=1) 10/1/98-9/30/99 & 10/1/99-9/30/2000	NY
Other: (N=2) 9/1/98-8/31/99 & 9/1/99-8/31/2000	ND, SD

Findings: Hearings Statistics

Data were analyzed to examine changes for the 10-year period from 1991 through 2000, as well as for the most recent two-year period. Percentages were used for comparisons only in carefully selected instances because very small changes in a state with low numbers can produce large percentages that are misleading.

Hearings Requested at Level One²

For the most recent two years (1999-2000), the total number of hearing requests across the country increased, continuing the general pattern of annual increases established since 1991. However, more states reported decreases from the previous year, although the reductions for each year did not involve all the same states. In 1999, 18 state total requests were the same or lower than the previous year, while in 2000, 23 states reported the same or fewer requests than the previous year.

² Data for the number of hearings requested include all requests for both one tier and two tier states.

Table 3 contains all the data on hearing requests for the 10-year period. State change patterns in requests for specific states over the full period have been inconsistent—in some states, requests increased every year, some decreased every year, and others have a mixed record.

Hearings Held at Level One

In the most recent two years, the total number of hearings held across the country declined, continuing the trend set in the previous three years. About the same number of states reported fewer hearings held in each of these years, but the reductions happened in different states. Data for hearings held in the 10-year period are contained in Table 4.

Analysis and Discussion

Tables 3, 4, and 5 at the end of this document contain the data that were available for analysis. Changes in these data over one or two years might be due to changes in policy, but they can also result from unique events or even unrelated changes in a state. Therefore, it is really not appropriate to characterize short-term variations as significant. However, as discussed below, multi-year trends in national totals may indicate trends in the due process system.

Data on hearings can be viewed from the perspective of changes in the difference between the number of requests and the number of hearings held. The current survey revealed a continuation of the trend, first noted in the previous report, that a growing number of hearing requests do not reach the level of a formal hearing. The following comparison over five years illustrates this trend:

Year	Total Requests	Total Hearings	No Hearings	Percent Not Heard
1996	7,532	3,555	3,977	52.8%
1997	9,246	3,402	5,844	63.2%
1998	9,827	3,315	6,512	66.3%
1999	9,971	3,126	6,845	68.6%
2000	11,068	3,020	8,048	72.7%

Further analysis of the full 10 years of data reveals a steady and clear trend when the total number of hearings requested and the total number of hearings held are contrasted over the two five-year periods they cover. When the year-to-year changes are averaged within each five-year period, the following pattern emerges:

- ◆ From 1991 to 1995, the number of requests increased an average of 4.3% per year, and the number of hearings held also increased an average of 10.0% per year.
- ◆ From 1996 to 2000, the number of requests increased an average of 10.4% each year, but the number of hearings held *decreased* at the average rate of 4.0% per year.

These data reveal that requests for a hearing have continued to increase nationally each year over the ten-year period, and more rapidly in the recent five years. It is important to recognize that there are many complex factors that influence the holding of hearings or the cancellation of such requests. For example, parents and school personnel may work out their differences informally, families may move, or requests may be withdrawn for a number of other reasons. While we do not know why specific requests do not reach the level of a formal hearing, one probable contributing factor is growth in the use of alternate strategies for dispute resolution, especially mediation.

Concluding Remarks

The 1997 amendments to IDEA require that every state establish procedures that will allow for the settlement of a dispute through mediation at state cost [34 CFR 300.506(a)], although many states offered mediation prior to that mandate. It can reasonably be expected that states will continue to improve their efforts to make mediation and other dispute resolution strategies available. If so, the decrease in the number of hearings held that is revealed in this report should continue.

Despite the long-standing due process requirements in federal law and regulations, there is no mandate for data collection on a national level. However, states have improved their capacity for information management, and each state now includes statistics on dispute resolution in the self-assessment that is a part of OSEP's Continuous Improvement Monitoring Process. Some states also provide such data to the public through their web sites. It is important that state data on dispute resolution continue to be compiled and analyzed on a national level because these data can be used as part of the evaluation of improvements in special education.
